Access OTDR

Compact, lightweight handheld OTDR optimized for access/FTTx network testing

- Top user-friendliness: one-button testing, combined with EXFO's proprietary FTTx software package (macro bend/fault finder, pass/fail indicators)
- Multiple options, including power meter, visual fault locator (VFL), fiber inspection probe, printer and IP testing
- Fault Finder mode, for quick identification/location of a fiber break
- Complete connectivity flexibility: USB stick compatibility and USB cable data download via ActiveSync*
- Advanced TFT transfective color display, for assured legibility under direct sunlight or in other demanding outside conditions
- Handheld, small, lightweight unit: 1 kg (2.2 lb)
- Built-in ruggedness for outside-plant usage
- Troubleshooting option, enabling in-service, out-of-band network testing

EXFO's AXS-100 Access OTDR combines the industry's leading OTDR technology with power meter functionalities in one powerful handheld unit. Optimized for testing passive optical networks (PON) within FTTx architectures, it offers several wavelength configurations and a wide range of options, for first-class flexibility. Use it at the optical network terminal (ONT), drop terminal or fiber distribution hub (FDH) for FTTH distribution (F2) fiber characterization, troubleshooting and fault locating.

Access Networks—Bringing New Testing Requirements

FTTx networks are becoming a worldwide solution for offering high-speed triple-play services, as carriers must ensure the same level of reliability and availability as that of traditional twisted-pair copper-based access networks.

Increased fiber deployment within access networks brings new requirements and the need for highly efficient testing strategies. As most of the work is performed in ever-changing outside conditions (cold/warm/hot, day/night, etc.), working space is often limited and access technicians are getting acquainted with the latest FTTx technologies, choosing a simple, reliable testing tool is key.

High-Speed Access Technologies

Reliable and Simple FTTx Testing—EXFO’s Proprietary FTTx Functionalities and Software Package

The AXS-100 Access OTDR makes testing an FTTx network an easy task. Simply connect the fiber, press FasTrace, and view the result. This handheld unit provides unparalleled ease of use, even for technicians with little background in optical/OTDR testing. Its proprietary FTTx software package enables you to view all results at once and easily assess link status. Without further analysis, you can view fiber length data and detailed pass/fail status, and even verify the presence of macrobendings.

Step 1: Connect the launch fiber

Step 2: Press FastTrace

Step 3: Look at the result

With its Auto, Manual, Fault Finder and real time modes, the AXS-100 is really the FTTx test instrument of choice.

The AXS-100's unique software functionalities provides in-depth results at a glance.

The more experienced user can also use the AXS-100's OTDR trace and event features.

Flexible Configurations and Options

Multiple Wavelengths, Large Storage Capacity

Choose the OTDR model that meets your wavelength requirements: 1550 nm, 1310/1550 nm, 1550/1625 nm and filtered 1625 nm, for in-service FTTH troubleshooting. What's more, the AXS-100 lets you save up to 500 traces.

In-Service PON Troubleshooting Option

The AXS-100 Access OTDR is specifically designed for in-service PON troubleshooting. It features an optional dedicated port for testing at 1625 nm incorporating a filter that rejects all unwanted signals (1310, 1490 and 1550 nm) that could contaminate the OTDR measurement. The filter only lets through the 1625 nm OTDR signal, ensuring accurate OTDR measurements.

In-service OTDR troubleshooting of optical fiber does not interfere with the normal operation and expected performance of the information channels. EXFO's AXS-100 does not interfere with the CO's laser transmitters, as it uses an out-of-band wavelength, as per the ITU-T L.41 (Maintenance Wavelength on Fibers Carrying Signals) recommendation.

¹ Additional filtering may be required at the transmission equipment.

Fiber Inspection Probe Option

In any optical network, connectors should be kept clean and in good condition—which is not always easy in outside conditions. Using a fiber inspection probe (enabling quick, easy inspection of fiber ends or connectors using the AXS-100's high-resolution display) is the best way to perform this critical connector check.

View fiber ends and connector endfaces on the AXS-100's high-resolution display

IP Testing Option

Performing complete access network testing also means testing the delivered service. With the AXS-100's IP testing option, you can perform basic IP verification that will facilitate future troubleshooting operations.

Visual Fault Locator

Ideal for easily identifying macrobend, bad splices or bad connectors. Built-in 650 nm visual fault location on a universal connector.

Power Meter GeX Option

The AXS-100's optional power meter covers the 800 to 1650 nm range, offering a power range of -60 to 26 dBm (GeX 2 mm). It comes with a three-year recommended calibration interval, providing for a very low cost of ownership.

USB Interfaces

Easily transfer your OTDR data files thanks to the AXS-100's two USB ports:

- Main USB port used to interface with a USB stick
- Secondary USB port allowing direct cable download to your PC using ActiceSync

OTDR—AXS-1000

Infrared Interface

Achieve fast, on-the-spot OTDR trace printing by using this standard infrared interface to send your file to any portable printer equipped with an infrared interface.

Fault Finder Option

When working in a central office (CO), it is critical to choose a device that will easily and quickly locate a fault, a simple tool that requires as little manipulation as possible, such as the AXS-100 Access OTDR. Equipped with the Fault Finder mode option, the AXS-100 automatically sets itself up for optimal, quick and reliable detection of the distance to the end of the fiber.
